PROJECTS

Portfolio website — Build on HTML, Css, Bootstrap

In this project I created a Responsive Website Design with BOOTSTRAP their are sections of pagination that are integrated by unique Ids that help me to spot the page. The portfolio gives the information about me the basic idea is to response the website to any device such as mobile that is small device, tablet a medium device and Desktop a large device the content will to display different from each device.

Speed Typing Test Application — Build on Javascript, FlexBox

Dynamic Content and Interactivity: With help of Javascript, HTML, Css, Flexbox and Bootstrap I created a counting timer in javascript by **setInterval**, **clearInterval** etc.fetching Informations by **fetch** command in javascript from url which provides the Quotes. **Get** command is used in the options to display the Quotes in textarea. Clicking the **submit button** if Quotes in the displayer area and Quotes text input area are the same the time will pause if not the time will continue. You can change the Quotes by clicking on the **Reset button**.

Player match Database — Build on SQL

Database layout on Player match, Run score, fours and sixes. Deals with Create table operator and column , row some unique id and data type like Strings, Integer,boolean and Float.
